Instructions for RST Forms Note: XR is used to indicate High Risk, since HR indicates Human Remains. XP = High Probability

1. The purpose of RST- 1 & 2 is to aid in rapidly determining Probability of Viable Victims and Relative Risk for numbers of structures.
2. The forms would be used when task forces need to respond to a large number of damaged structures following a sudden event.
3. Each structure is given a Classification for Viable Victim Probability: LP = Low, MP = Medium, and XP = High Probability.
 (Note: Input from Search Team Mgr & Rescue Team Mgr or Squad Officer should be sought in determining Victim Viability Classification.)
4. Each structure is given a Classification for Risk: LR = Low, MR = Medium, and XR = High Risk.
5. These classifications should be based on the criteria listed, and more than one structure may have the same classification
6. The classification should be based on the best judgments of the team, and must be made very rapidly. This form is only a guide.
7. Record GPS coordinates in the provided box. Specify format (always check with IMT or Plans to determine proper format & datum).
